CCIE® (Cisco Certified Internetwork Expert) is the premier certification for networking professionals, and certifies an individual's networking skills at the expert level. Candidates who pass both of the required exams, one written and one in a hands-on lab environment, receive a CCIE certificate from Cisco Systems. Prerequisites

There are no prerequisites for CCIE certification, but at least three years of practical experience implementing, deploying, operating, and troubleshooting complex Cisco networks is recommended. You will also need a familiarity with Cisco hardware and Cisco networking solutions, extensive knowledge of LAN and WAN technologies, and an in-depth understanding of the protocols used on routers, switches, bridges, and security devices.

Exams

To achieve CCIE certification, you must first pass a written qualification exam. After you pass the written exam, you qualify to schedule and take the corresponding, one-day lab exam

on-site at a Cisco CCIE lab. The hands-on lab exam emphasizes Cisco equipment command knowledge and network troubleshooting skills.
