

Pass CCIE Security Written Experience

Denyip have passed the CCIE security Written exam, and these are some study experience. My approach is **theory ? lab ? theory** at this stage.. For example when did study for TACACS+? First I went through RFC, security books chapters than did simple labs with debugs etc.. than I reviewed theory again. My MAIN resources for theory part are: 1) [RFC](#) You can use this search engine a find proper RFC for Radius, Ldap, IPsec? There is lot of valuable information 2)[CCBOOTCAMP's 2008 Cisco CCIE Security Written Study Guide](#) For my studies I bought its with [Quick reference sheet](#) only one CCIE written book on the market. I bought ebook with 24 Hour Print Option ? I printed all pages immediately after downloading Authors of that book are Colby LeMair (CCIE 12968 from Cisco), Farrukh Haroon (network engineer from middle east) CCSP studying for CCIE ? little bit strange for me but why not) and Brad Elis (CCIE 5796 CEO of Network learning) I think book is very good written ? all topics from the written blue print are covered pretty well. It has 565 pages. The book table of contents is similar as blueprint for written . In the end of every chapter is set of tough questions? 3) [Network Security Principles and Practices \(CCIE Professional Development\) \(CCIE Professional Development\)](#) Its quite old book but really well written and there are few great section (like AAA, IPSEC, GRE, IOS firewall) 4) [Cisco website](#) If I need some configuration examples or some guide I search Cisco web ? It doesnt apply for all topics but there is few really good documents for written exam 5)[CCIE Security Exam Quick Reference Sheets](#) Its really quick reference , but I plan use it in final stage when you need quick review of all topics. Yeah, if you are learning the ccie security, maybe you can get something.
