Great Share - CCIE R&S Quick Review Kit

 From the Krzysztof Zaleski's blog: Here are my personal study materials. It's a series of mindmaps I have created, which I thought it would be good to publish, so someone else might find them useful, too. However, those are not complete study materials. If you want to prepare yourself for any exam (especialy CCIE), you have to first read many good books (from Ciscopress) and CCO documentations to understand all technologies you learn. Then, lab the solutions up as much as you can ([INE](#) workbooks rule!). Also, if possible, attend some really good bootcamps, like [Narbik's](#) or [INE's](#). At the end of your journey, you can skim through the below documents.   If you find any bugs, inconsistencies or if you have any suggestions regarding usefulness and the quality of those documents, please do not hesitate to unicast me to inetcon@inetcon.org.   **Disclaimer!** Although, I do my best to make those documents free of errors, it is possible that there might be some mistakes. I do not take any responsibility for any issues, especialy with passing any exams. You may use those materials for free, and on your own risk. Please, read the Disclaimer page (in the Booklet)   [CCIE R&S Quick Review Kit](#) - 2009.05.22 New!!!
