

Wireless Technology Applications, Management and Security (09-2009) (ATTiCA)

Wireless Technology: Applications Management and Security explores wireless telecommunications issues such as wireless internet, wireless network modeling and RFID. The contributing authors are researchers who participated in the seventh annual Wireless Telecommunications Symposium, WTS 2007. Their chapters represent the best research presented at the conference.

Topics covered include:

- * wireless communications and network technologies;
- * algorithms, methods, simulations and software;
- * military applications of wireless communications and satellite applications;
- * RFID, sensor networks and wireless receivers.

Wireless Technology: Applications, Management and Security is a useful reference for researchers in the field.
