CCNA Voice (640-460) ? UC500 CCA Lab Simulation

Question: This task requires you to access the Cisco Unified Communications 500 Series GUI to configure it per the given requirements as stated in the scenario. From the choices on the left you may select Scenario, Cisco Unified Communications Server (CUC) Device, or Topology. The Scenario link provides the details of the task to be accomplished. The Topology link displays the network. To get access to UC500, click on the PC shown in the Topology or you can click on the CUC Device button on the left. Scenario: You have been asked to implement an SBCA solution for a startup company that has two technical support staff. The IP Phones use 4 digit extensions starting with 5001. Using the information in tables 1 and 2, configure the following: 1. Configure the AA & Voicemail features 2. Add the two IP Phones with extensions/users given in table 2 including Voicemail. 3. Configure Hunt Group so that all incoming PSTN calls always go to extension 5001. If extension 5001 is not available, route the call to extension 5002. If both extensions are busy or unavailable then send the call to Voicemail.

Table 1		
Username	Vaido CISCIC	
Password	cisco	
Voice Mail Pilot	5111	
Auto Attendant	5000	
Hunt Group Pilot	5010	

Table 2

Phone	Primary Ext.	LastName
0011.5C0E.5EDA	5001 (Phone 1)	Doe
0030.94C3.D18C	5002 (Phone 2)	Brown

It is the place where we have to solve all the requirement of this lab. So let's start! **Notice: Don't press OK or Apply until all the tabs are configured!** Requirement 1: Configure the AA & Voicemail features UC520, by default, only uses 3-digit extensions but all the required extensions in this lab are 4-digit so we have to adjust it by clicking on the Dial Plan tab. In the ?Number of Digits Per Extension? type 4, just leave other configurations unchanged because we will return to this tab later.

The first requirement of this lab-sim is to configure the AA & Voicemail features so click on this tab to see its content

Assign extensions to this tab as described in table 1 (Auto Attendant: 5000; Voicemail: 5111)

Requirement 2: Add the two IP Phones with extensions/users given in table 2 including Voicemail. To add two IP Phones, select

Users tab and assign corresponding values to these boxes	Device System	letwork AA &	/oicemail SIP T	runk Voice Feat	tures Dial Plan	Users
	🥖 Mac Addr	🥖 Phone	🖉 Primar	🥖 LastNa	/ FirstNa	/ UserID Passw
	B8FA.83C2.0000	ant	3001	Analog	PhoneA	0100

	B8FA.83C2.0002	anl	3003	Analog 🗙	PhoneC	x.00
	0011.5C0E.5EDA	7970	5001	Doe	John	Jdoe oobt
	0030.94C3.D18C	7970	5002	Brown	Jane	Jbrown

Requirement 3: Configure Hunt Group so that all incoming PSTN calls always go to extension 5001. If extension 5001 is not available, route the call to extension 5002. If both extensions are busy or unavailable then send the call to Voicemail. + **Configure**

Hunt Group The last parameter in table 1 is the Hunt Group Pilot number but we haven't configured it yet. To configure this parameter, click on the Voice Features tab and you will see a section for configuring Hunt Group, use these settings (Enable Hunt Groups: 1; Pilot#1: 5010; Hunt Type: sequential; Forward to: Voicemail)

lunt Gro	oup—				
	Hunt ⁻	🔽 Enable Hi Fimeout (sec	unt (ond:	Groups: 1	
Hu	unt Gro Pilot #	up Extension Hunt Type	Nur	nbers: Forward to	
1:	5010	sequential	¥	Voicemail	
2:	5002	sequential		None	
3:	5003	sequential	-	Auto Attendant Voicemail	
4:	5004	sequential	V	None	

Next we need to assign Phone 5001 & 5002 to this group. Return to Users tab and click on the ?More? text on Phone 1 Device System Netwo

🥖 Mac Addr	1
B8FA.83C2.0000	anl
B8FA.83C2.0001	anl
B8FA.83C2.0002	anl
0011.5C0E.5EDA	797
0030.94C3.D18C	797

In the ?Primary Extension? we can assign Phone 1 to Hunt Group 1 by setting Hunt Group of Phone 1 to 5010): Primary Extension
	Call Forward B
	Cetto Call Forward N
	CFNA Timeout
	VOIL

Also set the ?Call Forward Busy? and ?Call Forward No Answer? to 5002 (Phone 2) Do the same thing with Phone 2, but in the ?Call Forward Busy? and ?Call Forward No Answer? set the extensions to 5111 (Voicemail) **Primary Extension**

(Notice: In theory, we don't need to configure ?Call Forward Busy? and ?Call Forward No Answer? but in the exam we should configure them to make sure we get full mark.) Most things are done, but when a call coming how can we forward it to Hunt Group 1? This is the last step we need to do. Select **Dial Plan** Tab again, in the **Incoming Call handling ? FXO Trunks** set the text to **Hunt Group**. This will make another box, ?Available Hunt Groups?, appears; set it to **Hunt Group:1** (5010) **Incoming Call Handling**

For your information: Below is some information about Hunt Group: Hunt groups create a shared line appearance on specified phones that hunts for members of the hunt group based on configured parameters. Phones in a hunt group can ring based on a configured sequence, based on longest idle time or in a peer fashion. If no member of the hunt group is available to take the call, behaviors can be configured for forwarding the call or sending the caller to voicemail. ?????????? Note: As system configuration is done color highlighting is used both on the tab label and throughout the tab pages. To indicate if steps were completed correctly (green) highlighting is used. If additional configuration is required or if the configuration is incorrect (red) highlighting is used. The configuration cannot be saved until all items that are critical to the system are configured. Once all configuration is correct it can be saved to memory.
