

CBT Nuggets - CCIE Video Practice Lab

Note: This CBT Nuggets CCIE Practice Lab focuses on Routing and Switching (R&S) technologies. The eight-hour hands-on lab portion of the CCIE certification exams is the most rigorous part of becoming CCIE certified. These videos will give you problem-solving knowledge, techniques and confidence to solve scenarios like those given on the exams. The videos follow expert trainer Jeremy Cioara through the problem solving process in real-time, so it's easy to learn the thought processes behind his techniques for identifying and solving network problems. By understanding why he solves problems in the ways that he does, you'll be better at coming up with your own solutions for new problems that you come across. **What You'll Learn** Video 1: CCIE Practice Labs Introduction|39:38 Video 2: CCIE Lab Setup|27:56 Video 3: Bridging and Switching: Frame Relay|25:10 Video 4: Bridging and Switching: 3550|46:37 Video 5: IGP Protocols: OSPF Part 1|40:20 Video 6: IGP Protocols: OSPF Part 2|33:03 Video 7: IGP Protocols: RIPv2 |32:42 Video 8: IGP Protocols: EIGRP|37:14 Video 9: EGP Protocols: BGP Part 1|51:28 Video 10: EGP Protocols: BGP Part 2|24:44 Video 11: EGP Protocols: BGP Part 3|35:38 Video 12: ISDN: Connectivity and Dial Restrictions|37:42 Video 13: Cisco IOS Features: DHCP|19:30 Video 14: Cisco IOS Features: Redundant Routing|32:27 Video 15: Cisco IOS Features: SNMP|29:02 Video 16: Cisco IOS Features: NTP|31:34 Video 17: Cisco IOS Features: Miscellaneous Tasks|21:50 Video 18: Quality of Service|39:05 Video 19: Multicast|21:13 Video 20: Security|25:17 Download **[This hidden password content is only available for our VIP member.
