(choose three) A.extended memory support B.storage-intensive platform C.enterprise-focused design D InfiniBand networking

E.blade-based deployments F.cost-effective server Answer: ACE **QUESTION 10** How does a switch respond when it receives a message? A.It reads the Layer-5 information and sends the message directly to the intended computer. B.It reads the Media Access Control (MAC) address and broadcasts the message to all the computers that are connected to the switch. C.It reads the Media Access Control (MAC) address and sends the message directly to the intended computer. D.It reads the Layer-5 information and broadcasts the message to all the computers that are connected to the switch. Answer: C

QUESTION 11 Which three benefits are provided by the implementation of Cisco C-Series servers into a virtualized data center environment? (choose three) A.extended memory support B.storage-intensive platform C.enterprise-focused design D InfiniBand networking

E.blade-based deployments F.cost-effective server Answer: ACE **QUESTION 12** How does a switch respond when it receives a message? A.It reads the Layer-5 information and sends the message directly to the intended computer. B.It reads the Media Access Control (MAC) address and broadcasts the message to all the computers that are connected to the switch. C.It reads the Media Access Control (MAC) address and sends the message directly to the intended computer. D.It reads the Layer-5 information and broadcasts the message to all the computers that are connected to the switch. Answer: C

QUESTION 13 Which three benefits are provided by the implementation of Cisco C-Series servers into a virtualized data center environment? (choose three) A.extended memory support B.storage-intensive platform C.enterprise-focused design D InfiniBand networking

E.blade-based deployments F.cost-effective server Answer: ACE **QUESTION 14** How does a switch respond when it receives a message? A.It reads the Layer-5 information and sends the message directly to the intended computer. B.It reads the Media Access Control (MAC) address and broadcasts the message to all the computers that are connected to the switch. C.It reads the Media Access Control (MAC) address and sends the message directly to the intended computer. D.It reads the Layer-5 information and broadcasts the message to all the computers that are connected to the switch. Answer: C

QUESTION 15 Which three benefits are provided by the implementation of Cisco C-Series servers into a virtualized data center environment? (choose three) A.extended memory support B.storage-intensive platform C.enterprise-focused design D InfiniBand networking

E.blade-based deployments F.cost-effective server Answer: ACE **QUESTION 16** How does a switch respond when it receives a message? A.It reads the Layer-5 information and sends the message directly to the intended computer. B.It reads the Media Access Control (MAC) address and broadcasts the message to all the computers that are connected to the switch. C.It reads the Media Access Control (MAC) address and sends the message directly to the intended computer. D.It reads the Layer-5 information and broadcasts the message to all the computers that are connected to the switch. Answer: C
