## I passed CCNA. This is how I did it for those interested.

I passed my ICND 1 a while back and now my ICND 2 which now gives me my CCNA R&S. Thanks to all that helped me on this site, it really is the best place to come when you can't get a clear answer from the book. There is always someone who knows the answer to any question put forward. My next step is CCNA Wireless then I think CCNP R&S. I did fail the ICND 2 a couple of weeks ago but the computer froze on me 3 or 4 times and eventually the keyboard locked out on me. I had about 25 minutes for the whole exam rather than the normal amount of time. I either had to give up then or just rush and try my best. I did the latter, I got close but not close enough. I hope to get a free exam voucher for that, it is still under investigation. As I travel around the world to different countries and cities quite often my way of studying is not the best but I have little choice. How I did it may help others especially if your working life is similar to mine so here it is.

few things so I could get different views/questions from different authors. All of these are still cheap enough to buy bar one. Cisco Press ICND 2 by Wendell Odom. Top quality book with a good practice exam, this also contains 6 simulator questions. CCNA Portable Command Guide Brilliant for carrying around and it has a lab example on all subjects and some good tips. Command Memorizer This is cheap very good for practicing your commands. There are other things that come with it but I never used them as my other study resources were good enough. I would have paid the money just for this one part.

www.configureterminal.com/cisco-ccent-ccna/ccent-command-memorizer-icnd1-simulations-exams.html Bryant Advantage CCNA study guide is cheap and has some good things in it, he has a good way of explaining things. CCNA Simulator? Packet Tracer 5.2 Brilliant bit of kit but probably not good enough for CCNP. I came across a few limitations on some CCNA labs so for CCNP there will probably be a lot more. Videos TrainSignal by Chris Bryant, not cheap but they are very good. There are videos for all CCNA subjects and these are great to watch while static and on the move. I bought my self an IPOD so I can also watch them on the train and plane while I am travelling.

around the world a lot I cannot carry equipment around with me. However, to go further than the CCNA I am going to have to rent Racks. I could have rented racks during my CCNA study but I live in hotels most of the time and the connections are not good for email let alone a rack. My idea was to build my own lab and have remote access to it but getting the time to build it when I am home only 1 week at a time is also difficult especially when I have a family and small children to entertain.

**long did it take to study for the ICND2/CCNA** I started studying ICND 2 middle of May 2009. I had a 4 month break with no study at all due to long work hours. I then went back to my studies. It total it was around 4 or 5 months to study for ICND 2. I studied most night and at most weekends.

ready for the CCNA exam This was not easy with the CCNA because it contains so much material. I went over the practice exams time and time again but skipping over the questions I knew I could answer and concentrating ones I could not so easily/quickly, eventually leaving me with no questions/subjects to concentrate on. I did the practice custom exams only, this concentrates on one subject rather than a few at the same time. I found this the best way as at first I was getting mixed up with STP, RSTP when the questions were all mixed up. I went over the labs on each subject until I could create, break and fix each one. By this time I was just repeating myself and I knew I could answer the questions and I could build all the labs. At that point I guessed/hoped I was ready so I booked my exam for one week later.

------ During the week before the

**exam** I personally think the best time to book an exam is when you think you are ready not in advance when you think you may be ready. By giving myself 1 more week doing it this way I could then take my time, double check and fine tune what I knew. It was worth it because I did come across some things I thought I knew well but I was able to fine tune those in time. The night before the exam I opened up the practice exam and chose all questions. Each question I went to I just clicked on show answer, I found this just helped me remember a bit more of the theory and obviously I could go through all 150 + questions quickly.

exam 8.30 in the morning so I could get work as early as possible straight after. I could not book it for weekends. I got up early and the only thing I took with me was my CCNA Portable Command Guide from Cisco Press. I went to a coffee shop close to the exam centre, had a coffee and some breakfast and just flicked through the book. I would have taken my ICND 2 book but I don't travel with books like that as they are too big and bulky on planes so I just use PDF's.
