

IPexpert CCIE Voice 3.0 Lab Preparation

IPexpert's CCIE Voice (3.0) Video on Demand Course is designed for candidates that wish to learn the protocols and technologies in the CCIE Voice Lab exam blueprint from home or office. It is clearly the industry's most thorough CCIE Voice video training solution on the market. Listen as industry-expert Vik Malhi lectures on nearly every technology and protocol seen on the new CCIE Voice 3.0 Lab blueprint. Vik's lectures are information-rich video training solution that consists of over 45 total hours of content. After each topic is covered, Vik dives into lab exercises designed to demonstrate and explain the fundamentals and complex implementations of the challenging protocols that clients may encounter in the real CCIE Voice 3.0 Lab. These demonstrations amount to a full week's worth of information-rich, concise training at the clients fingertips. These valuable materials contain detailed questions and solutions on topics including Implementing and Troubleshooting Infrastructure and Services, CUCM and CUCME Basics, Endpoint Registration, Voice Gateways, CUCM and CUCME Call Routing, Device Mobility, Unified Mobility, Media Resources, CAC and QoS, High Availability, Supplementary Services, CUCM and CUCME Voice Applications, Messaging and Cisco Unified Presence. In addition, Vik will teach invaluable tips on lab strategy and test preparation techniques to ensure clients maximize their opportunity to pass the CCIE Voice Lab. In addition to the Video on Demand Course, clients also receive electronic access to the slide deck used throughout the Video on Demand Course, and a book of topology diagrams used during the configuration portion of this class. (This will automatically be added to client members area upon purchase). Download
