QUESTION 61 Drag and Drop Question You plan to deploy a cloud service named contosoapp that has a web role named contosoappweb and a worker role named contosoimagepurge. You need to ensure the service meets the following requirements:

- Contosoappweb can be accessed over the Internet by using http.
- Contosoimagepurge can only be accessed through tcp port 5001 from contosoappweb.
- Contosoimagepurge cannot be accessed directly over the Internet.

Which configuration should you use? To answer, drag the appropriate configuration setting to the correct location in the service configuration file. Each configuration setting may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Configuration Settings

```
<InputEndpoint name="Endpoint1" protocol="http" port="80" />

<InternalEndpoint name="Endpoint1" protocol="http" port="80" />

<InputEndpoint name="Endpoint1" protocol="http" port="80" />

<InputEndpoint name="Endpoint1" protocol="http" port="80" />

<Destinations>
  <RuleEndpoint endpointName="Endpoint1" ruleName="contosoimagepurge"/>
</Destinations>
<whenSource matches="AnyRule">
  <ruleName ruleName="ContosoWeb"/>
</whenSource>

<Destinations>
  <RuleEndpoint endpointName="Endpoint1" ruleName="contosoimagepurge"/>
</Destinations>
<allowAllTraffic/>
```

Service Configuration File

```
<ServiceDefinition name="contosoapp">
  <module name="contosoWeb" uriName="Small">

    <InputEndpoint name="Endpoint1" protocol="http" port="80" />

    </Endpoints>
    </WebRole>
    <whenRule name="contosoimagepurge" uriName="Small">
      <Endpoints>

        <InputEndpoint name="Endpoint1" protocol="http" port="8080" />

      </Endpoints>
      </WebRole>
      <networkTrafficRules>
        <onlyAllowTraffic/>
      </networkTrafficRules>
    </whenRule>
  </module>
</ServiceDefinition>
```

QUESTION 62 Your company network includes two branch offices. Users at the company access internal virtual machines (VMs). You want to ensure secure communications between the branch offices and the internal VMs and network. You need to

create a site-to-site VPN connection. What are two possible ways to achieve this goal? Each correct answer presents a complete solution. A. a private IPv4 IP address and a compatible VPN device B. a private IPv4 IP address and a RRAS running on Windows Server 2012 C. a public-facing IPv4 IP address and a compatible VPN device D. a public-facing IPv4 IP address and a RRAS running on Windows Server 2012

Answer: CD QUESTION 63 You manage a large datacenter that has limited physical space. You plan to extend your datacenter to Azure. You need to create a connection that supports a multiprotocol label switching (MPLS) virtual private network. Which connection type should you use? A. Site-to-site B. VNet-VNet C. ExpressRoute D. Site-to-peer

Answer: B QUESTION 64 You manage a cloud service named fabrikam Reports that is deployed in an Azure data center. You deploy a virtual machine (VM) named fabrikamSQL into a virtual network named fabrikamVNet. FabrikamReports must communicate with fabrikamSQL. You need to add fabrikam Reports to fabrikamVNet. Which file should you modify? A. the network configuration file for fabrikamVNet B. the service definition file (.csdef) for fabnkamReports C. the service definition file (.csdef) for fabrikamSQL D. the service configuration file (.cscfg) for fabrikamReports E. the service configuration file (.cscfg) fabrikamSQL

Answer: B QUESTION 65 You manage an application deployed to virtual machines (VMs) on an Azure virtual network named corpVnet1. You plan to hire several remote employees who will need access to the application on corpVnet1. You need to ensure that new employees can access corpVnet1. You want to achieve this goal by using the most cost effective solution. Which two actions should you perform? Each correct answer presents part of the solution. A. Create a VPN subnet. B. Enable point-to-point connectivity for corpVnet1. C. Enable point-to-site connectivity for corpVnet1. D. Create a gateway subnet. E. Enable site-to-site connectivity for corpVnet1. F. Convert corpVnet1 to a regional virtual network.

Answer: AD QUESTION 66 Drag and Drop Question

You have an Azure Virtual Network named fabVNet with three subnets named Subnet-1, Subnet-2 and Subnet-3. You have a virtual machine (VM) named fabVM running in the fabProd service. You need to modify fabVM to be deployed into Subnet-3. You want to achieve this goal by using the least amount of time and while causing the least amount of disruption to the existing deployment. What should you do? To answer, drag the appropriate Power Shell cmdlet to the correct location in the Power Shell command. Each cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

PowerShell cmdlets	PowerShell Command
Get-AzureVM	PS C:\> \$VM = PowerShell cmdlet "fabProd" "fabVM"
Get-AzureVMImage	PS C:\> PowerShell cmdlet "Subnet-3" -VM \$VM
Set-AzureSubnet	PS C:\> PowerShell cmdlet "fabProd" "fabVM" -VM \$VM
Update-AzureVM	
New-AzureVM	
Set-AzureVNetConfig	
Update-AzureVMImage	

Answer:

PowerShell cmdlets	PowerShell Command
Get-AzureVM	PS C:\> \$VM = Get-AzureVM "fabProd" "fabVM"
Get-AzureVMImage	PS C:\> Set-AzureSubnet "Subnet-3" -VM \$VM
Set-AzureSubnet	PS C:\> Update-AzureVM "fabProd" "fabVM" -VM \$VM
Update-AzureVM	
New-AzureVM	
Set-AzureVNetConfig	
Update-AzureVMImage	

QUESTION 67 Hotspot Question You manage an Azure Web Site named contosoweb. Some users report that they receive the following error when they access contosoweb: "http Status 500.0 - Internal Server Error." You need to view detailed diagnostic information in XML format. Which option should you enable? To answer, select the appropriate option in the answer area. **Answer Area**

Answer: **Answer Area**

Application diagnostics

APPLICATION LOGGING (FILESYSTEM) ☐ OFF ☐ ON

www.passleader.com

WEB SERVER LOGGING ☐ OFF ☐ ON

DETAILED ERROR MESSAGES ☐ OFF ☐ ON

FAILED REQUEST TRACING ☐ OFF ☐ ON

<http://www.passleader.com/70-533.html> **QUESTION 68** Drag and Drop Question You manage an Azure Web Site named contososite. You download the subscription publishing credentials named Contoso-Enterprise.publishsettings. You need to use Azure Power Shell to achieve the following: - Connect to the Contoso-Enterprise subscription. - Create a new App Setting named CustomSetting with a value of True. - Restart the website. Which commands should you use? To answer, drag the appropriate Azure PowerShell command to the correct location in the solution. Each command may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Azure PowerShell Commands	Solution
Set-AzureWebsite	PS C:\> Azure PowerShell Command
Get-AzurePublishSettingsFile	PS C:\> Select-AzureSubscription Contoso-En
Import-AzurePublishSettingsFile	PS C:\> \$setting = @{"IsCustom" = "true"}
Start-AzureWebsite	PS C:\> Set-AzureWebsite -Name contososite -PublishSettingsFile Contoso-Enterprise.publishsettings
Restart-AzureWebsite	PS C:\> Restart-AzureWebsite -Name contososite
Show-AzureWebsite	PS C:\> Show-AzureWebsite -Name contososite

Answer:

Azure PowerShell Commands

Set-AzureWebsite

Get-AzurePublishSettingsFile

Import-AzurePublishSettingsFile

Start-AzureWebsite

Restart-AzureWebsite

Show-AzureWebsite

Solution

```
PS C:\> Import-AzurePublishSettingsFile c:\Contoso\Enterprise.publishsettings
PS C:\> Select-AzureSubscription Contoso-Enterprise
PS C:\> $setting = @"[IsCustom" = "true"]
PS C:\> Set-AzureWebsite contoso.site -AppSettings $setting
PS C:\> Start-AzureWebsite contoso.site
```

QUESTION 69 Your company has a subscription to Azure. You plan to deploy 10 websites. You have the following requirements: - Each website has at least 15 GB of storage. - All websites can use azurewebsite.net. You need to deploy the 10 websites while minimizing costs. Which web tier plan should you recommend? A. Free B. Small Business C. Standard D. Basic Answer: C

QUESTION 70 Drag and Drop Question You manage a solution deployed in two Azure subscriptions for testing and production. Both subscriptions have virtual networks named fabVNet. You plan to add two new virtual machines (VMs) in a new subnet. You have the following requirements: - Deploy the new VMs to the virtual network in the testing subscription. - Minimize any errors in defining the network changes. - Minimize the work that will be required when the change is made to the production virtual network. Which three steps should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Action

Add an accessibility group to the network configuration file.

Add a subnet to the Virtual Network using the Management Portal.

Deploy the new VMs to the new subnet.

Add an accessibility group to the Virtual Network using the Management Portal.

Deploy the new VMs to the new accessibility group.

Export the network configuration.

Add a subnet to the network configuration file.

Import the network configuration.

Answer Area

Answer:

Action

Add an accessibility group to the network configuration file.

Add a subnet to the Virtual Network using the Management Portal.

Deploy the new VMs to the new subnet.

Add an accessibility group to the Virtual Network using the Management Portal.

Deploy the new VMs to the new accessibility group.

Export the network configuration.

Add a subnet to the network configuration file.

Import the network configuration.

Answer Area

Add a subnet to the network configuration file.

Import the network configuration.

Deploy the new VMs to the new subnet.

QUESTION 71 You administer an Azure Web Site named contoso. The development team has implemented changes to the

website that need to be validated. You need to validate and deploy the changes with minimum downtime to users. What should you do first? A. Create a new Linked Resource. B. Configure Remote Debugging on contoso. C. Create a new website named contosoStaging. D. Create a deployment slot named contosoStaging. E. Back up the contoso website to a deployment slot. Answer: A

QUESTION 72 You manage an Azure Web Site that is running in Shared mode. You discover that the website is experiencing increased average response time during periods of heavy user activity. You need to update the website configuration to address the performance issues as they occur. What should you do? A. Set the website to Standard mode and configure automatic scaling based on CPU utilization. B. Configure automatic seating during specific dates. C. Modify the website instance size. D. Configure automatic scaling based on memory utilization. E. Set the website to Basic mode and configure automatic scaling based on CPU utilization. Answer: A

QUESTION 73 Drag and Drop Question You manage an Azure Web Site in Standard mode at the following address: contoso.azurewebsites.net. Your company has a new domain for the site that needs to be accessible by Secure Socket Layer (SSL) encryption. You need to be able to add a custom domain to the Azure Web Site and assign an SSL certificate. Which three steps should you perform next in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. More than one order of answer choices may be correct You will receive credit for any of the correct

Actions	Answer Area
Create a CNAME record from www.contoso.com to contoso.azurewebsites.net.	
Add www.contoso.com to the list of domain names as a custom domain.	
Add an A record in your DNS for www.contoso.com to point to the Azure Web Site IP.	
Add SSL binding for the www.contoso.com domain with the IP-based SSL option selected.	
Add SSL binding for the www.contoso.com domain with the Server Name Indication (SNI) SSL option selected.	
Create a new file that will redirect the site to the new URL and upload it to the Azure Web Site.	

Answer:

Actions	Answer Area
Create a CNAME record from www.contoso.com to contoso.azurewebsites.net.	Add SSL binding for the www.contoso.com domain with the IP-based SSL option selected.
Add www.contoso.com to the list of domain names as a custom domain.	Create a new file that will redirect the site to the new URL and upload it to the Azure Web Site.
Add an A record in your DNS for www.contoso.com to point to the Azure Web Site IP.	Add SSL binding for the www.contoso.com domain with the Server Name Indication (SNI) SSL option selected.
Add SSL binding for the www.contoso.com domain with the IP-based SSL option selected.	
Add SSL binding for the www.contoso.com domain with the Server Name Indication (SNI) SSL option selected.	
Create a new file that will redirect the site to the new URL and upload it to the Azure Web Site.	

QUESTION 74 You manage an Azure Web Site named contosoweb. Logging is enabled for contosoweb. You need to view only errors from your log files in a continuous stream as they occur. Which Windows Power Shell command should you execute? A. Get-AzureWebSiteLog -Name contosoweb -OutBuffer Error B. Save-AzureWebSiteLog -Name contosoweb -Output Errors C. Get-AzureWebSiteLog -Name contosoweb -Tail -Message Error D. Get-Azure WebSiteLog -Name contosoweb -Message Error Answer: C

QUESTION 75 You administer a solution deployed to a virtual machine (VM) in Azure. The VM hosts a web service that is used by several applications. You are located in the US West region and have a worldwide user base. Developers in Asia report that they

experience significant delays when they execute the services. You need to verify application performance from different locations. Which type of monitoring should you configure? A. Disk Read B. Endpoint C. Network Out D. CPU E. Average Response Time
Answer: B
