NEW QUESTION 292 You have 100 Windows 8.1 Pro client computers that run. Each computer has a single local hard disk drive, a DVD drive, and an external USB drive. Each computer has a different set of line-of-business (LOB) desktop applications that are installed locally. All of the applications store their configurations in the HKEY_Local_MachineSoftware registry hive. You need to design a recovery solution to ensure that you can restore the initial state of the locally installed LOB desktop applications if an application is misconfigured. The solution must preserve the existing locally stored user data. What should you do?

A. Run redmg.exe. Perform a system reset.
B. Create a restore point.
C. Perform a system restore.
D. Enable File History. Restore files by using File History.

D. Create a recovery drive. Start the computer from the recovery drive and perform a refresh. **Answer: C**

NEW QUESTION 293 You are a desktop support technician for your company. A user reports that her Windows 8.1 computer is missing .dll files. You need to restore the missing *dll files without losing the user's data. What should you do?

A. Use System Restore.
B. Refresh the computer.
C. Open PowerShell and run the wbadmin cmdlet.
D. Run the redmg command. **Answer: A**
