QUESTION 81 You are developing an ASP.NET web page that includes a textbox control that has ID txtDate. You need to ensure that the user enters a valid date in the text box. Which markup should you use? A. `<asp:CompareValidator ID="valDate" runat="server" Type="Date" ControlToCompare="txtDate" Operator="Equal"/>` B. `<asp:CompareValidator ID="valDate" runat="server" Type="Date" ControlToCompare="txtDate" Operator="DataTypeCheck"/>` C. `<asp:CompareValidator ID="valDate" runat="server" Type="Date" ControlToValidate="txtDate" Operator="DataTypeCheck"/>` D. `<asp:CompareValidator ID="valDate" runat="server" Type="Date" ControlToValidate="txtDate" Operator="Equal"/>` Answer: C QUESTION 82 You are developing an ASP.NET MVC 2 Web Application that displays daily blog posts. Visitors access a blog post page by using a Web address to pass in the year, month, and day-for example, `contoso.com/2010/07/20`. The application must register the appropriate route to use the Display action of the blog controller. Only page visits with a four digit year, two-digit month and two-digit day can be passed to the action. You need to ensure that the route is registered correctly. Which code segment should you add? A. `routes.MapRoute("DailyBlogPosts", "{year}/{month}/{day}", new { controller="Blog", action="Display", year="@d{4}", month="@d{2}", day="@d{2}" });` B. `routes.MapRoute("DailyBlogPosts", "{year}/{month}/{day}", new { controller="Blog", action="Display", year="@d{4}", month="@d{2}", day="@d{2}" });` C. `routes.MapRoute("DailyBlogPosts", "{year}/{month}/{day}", new { controller="Blog", action="Display", year="yyyy", month="mm", day="dd" });` D. `routes.MapRoute("DailyBlogPosts", "{year}/{month}/{day}", new { controller="Blog", action="Display", year="yyyy", month="mm", day="dd" });` Answer: A QUESTION 83 You are developing an ASP.NET MVC 2 application. You create a login user control named `login.ascx`. You need to display `Login.ascx` in a view. What should you do? A. Use an HTML server-side include. B. Use the `HTML.Display` method. C. Use the `HTML.Partial` method. D. Use the `@Import` directive. Answer: C QUESTION 84 You are developing an ASP.NET web application. The application includes a class library named `Contoso.dll` that will be used by other ASP.NET applications on the same server. You need to ensure that only one copy of the class library exists on the server. What should you do? A. Add the following code segment to the top of each web page. `<%@ Register TagPrefix="cc" NameSpace="contoso" Assembly="contoso" %>` B. Install the class library into the Global Assembly Cache on the server. C. Deploy the class library on the `App_Code` folder D. Add the following assembly attribute to the `Contoso` class library's `AssemblyInfo.cs` file. `[assembly: AssemblyConfiguration("Shared")]` Answer: B QUESTION 85 You are developing an ASP.NET MVC2 application. You add an area named `Admin` to the application. `Admin` contains a controller class named `MainController`. You create a view named `Index` outside the `Admin` area. You need to add a link in the `Index` view that will call the `Default` action. Which markup should you use? A. `<%= Html.ActionLink("Admin", "Default", "Main", new { area="admin" }, null) %>` B. `<%= Html.RouteLink("Admin", "Default", new { area="admin" }, "Main") %>` C. `<%= Html.RenderAction("Admin", "Default", new { area="admin" }); %>` D. `<%=`

Html.Action("Admin","Default",new {area="admin"}) %> Answer: A QUESTION 86 You are developing as ASP.NET Web application that will display a list of values. The application must display the values in a tabular format in columns from top to bottom. You need to choose a control that can be bound directly to the list to render this display. Which control should you use?

A. DataGrid B. Datalist C. GridView

D. DataPager Answer: B QUESTION 87 You are developing an ASP.NET web page that includes a Panel Control that has ID ContentSection. You need to add a text box control to the Panel control. Which code segment should you use?

A. this.ContentSection.Controls.Add(this.FindControl(contentSection.ID + "asp:TextBox"));
B. this.LoadTemplate("asp:TextBox").InstantiateIN(ContentSection); C. this.RequiresControlState(this.LoadControl(typeof(TextBox),null)); D. this.ContentSection.Controls.Add(this.LoadControl(typeof(TextBox),null));

Answer: D QUESTION 88 You are developing an ASP.NET MVC 2 application. A view contains a form that allows users to submit their first name. You need to display the value that is submitted, and you must ensure that your code avoids cross-site scripting. Which code segment should you use?

A. <%: Model.FirstName %> B. <%= Model.FirstName %>

C. <% Response.Write(Model.FirstName) %> D. <% Response.Write(HttpUtility.HtmlDecode(Model.FirstName)) %>

Answer: A QUESTION 89 You are developing an ASP.NET Web page that will display the median value from a sequence of integer values. You need to create an extension method to compute the median value. Which interface should you add the extension method to? A. IComparer<T>

B. IEnumerable<T> C. IEnumerator<T> D. IEqualityComparer<T>

Answer: B QUESTION 90 You are creating an ASP.NET Web application. The application must call a WCF service by using a WCF routing service. You need to ensure that the application can invoke the target service by using the router endpoint. What should you do? A. Add a service reference to the router service. In the client binding configuration, specify the address of the router service. B. Add a service reference to the target service. In the client binding configuration, specify the address of the target service. C. Add a service reference to the router service. In the client binding configuration, specify the address of the target service. D. Add a service reference to the target service. In the client binding configuration, specify the address of the router service.

Answer: D
