(Ctrl+End) **NEW QUESTION 1** You verify that one email message sent to one mailboxes on EX1 are delivered successfully. You also verify that all of mailbox databases on EX1 are mounted. Delete 20 GB of unnecessary data on EX1. You discover that the hard disk drive on EX1 has only 10 GB of free space. You delete 20 GB of unnecessary data on EX1. Users report that now they are receiving all of their email messages successfully to their mailbox. You need to ensure that EX1 will prevent the delivery of email messages to mailboxes only if less than 2 GB of hard disk space is available. What should you do? A. Modify the Organization transport settings. B. Disable the Safety Net feature. C. Modify the EdgeTransport.exe.config file. D. Modify the mailbox database settings. Answer: D **NEW QUESTION 2** Hotspot Question You have an Exchange Server 2013 organization. Each data center contains several Exchange servers and connects directly to the Internet. Each office has a Send connector to the Internet. You configure each office as a separate site and you configure Main1 as a hub site. The company opens a branch office that contains a small data center. You deploy an Exchange Server 2013 server to the data center. The data center has a direct network link to Main1. All of the site link costs are set to the default values. In the table below identify through which office the email message will be transmitted first for each scenario.

Scenario	Through Main1	Through Main2
A user in the branch office sends an email message to a recipient in Main1.	<input checked="" type="radio"/>	<input type="radio"/>
A user in the branch office sends an email message to the Internet.	<input checked="" type="radio"/>	<input type="radio"/>
A user in the branch office sends an email message to a recipient in Main2.	<input checked="" type="radio"/>	<input type="radio"/>

Answer: See full version from <http://www.passleader.com/70-341.html> **NEW QUESTION 3** You have an Exchange Server 2013 organization that contains three Client Access servers named EX1, EX2, and EX3. The organization also contains eight Mailbox servers. All users have client computers that have Microsoft Outlook 2013 installed. You create a Network Load Balancing (NLB) cluster and add all of the Client Access servers as hosts in the cluster. The cluster has the following configurations: - The default host is set to EX1. - A port rule is configured for HTTPS traffic. - The port rule has the affinity parameter set to Single. - The port rule has the filtering mode set to Single host. The port rule has the Handling priority set to the default option. You discover that Outlook always connects to EX1. You need to ensure that client connection are handled by all three Client Access servers. What should you modify? A. the filtering mode of the port rule. B. the affinity parameter of the port rule. C. the handling priority of the port rule. D. the default host of the cluster. Answer: C **NEW QUESTION 4** Your network contains an Active Directory forest named contoso.com. The forest contains the domain controllers configured as shown in the following table.

Domain controller name	Active Directory domain	Active Directory site	Operating system
DC1	Contoso.com	East	Domain n emulator,
DC2	Contoso.com	West	Schema n infrastruct
DC3	Contoso.com	West	Not appli
DC4	Operations.contoso.com	West	PDC emul master
DC5	Operations.contoso.com	West	Infrastruct

You plan to deploy an Exchange Server 2013 organization to the forest. A company policy prevents administrators from logging on to DC2 to perform installations. You need to prepare the Active Directory schema for the planned Exchange Server deployment. You verify that your user account has all the required permissions to achieve the task. The solution must minimize changes to the Active Directory infrastructure. A. Move the schema master role to DC1, and then run Exchange setup. B. Deploy a member server to contoso.com, and then move the server to the West site. Run adprep.exe from the member server. C. Log on to DC3 and then run Exchange setup. D. Log on to any server in the West site, and then run Exchange setup. Answer: A

NEW QUESTION 5 You have an Exchange Server 2013 organization. A new policy requires that all iPhone users access their on-premises mailbox by using the OWA for iPhone app. You need to ensure that push notifications for the OWA for iPhone app are configured before the users install the app. Which three actions should you perform? Each correct answer presents part of the solution. A. Configure Microsoft Azure Active Directory Sync (Azure AD Sync). B. Modify the EWS virtual directory. C. Enable push notifications proxy. D. Enroll in Microsoft Office 365 for business. E. Modify the OWA virtual directory. F. Set up on premises Exchange 2013 to Office 365 Authentication. Answer: CDF

NEW QUESTION 6 You have an Exchange Server 2010 organization. You deploy several Exchange Server 2013 servers to the organization and you deploy the required certificates. You attempt to connect to an Exchange Server 2013 server by using Outlook Web App and you discover the error message shown in the exhibit (Click the Exhibit button.) You need to prevent the error message from appearing when users access Outlook Web App on the new servers. What should you do? A. Remove the Exchange Server 2010 servers from the organization. B. Run the Remove-ExchangeCertificate cmdlet. C. From the Exchange Management Console, remove the certificates from the Exchange Server 2010 servers. D. From the Exchange Admin Center, modify the properties of the OWA virtual directory. Answer: B

NEW QUESTION 7 Drag and Drop Question You have an Exchange Server 2013 organization that contains a server named EX1. The network contains two domain controllers named DC1 and DC2. You plan to make changes to the Active Directory infrastructure and to remove DC2 from the network. You need to verify whether EX1 writes Active Directory changes to DC2. What command should you run? To answer, select the appropriate options in the answer area.

Answer A

Get-Dom
Get-Add
Get-Exch
Get-Orga

Answer: Answer Area

Get-DomainController

Get-AddServerSettings

Get-ExchangeServer

Get-OrganizationConfig

Identity

EX1

DC1

DC2

Mark Question 7 of 15 (Litware..., Q5) Pause 01:19:21

Drag and Drop Question

You need to identify which external namespaces must be used for the Exchange servers in each office.

Which external namespaces should you identify for each office? To answer, drag the appropriate namespace to the correct office in the answer area. Each namespace may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.

Namespaces

- \$null
- autodiscover.litwareinc.com
- client.litwareinc.com
- failbackurl.litwareinc.com
- legacy.litwareinc.com

Answer Area

Office	Namespace
Baltimore	
Los Angeles	
Chicago

Mark Question 13 of 15 (Litware..., Q3) Pause 01:18:07

You are testing the planned implementation of Exchange Server 2013.

After you begin moving several mailboxes to Exchange Server 2013, you discover that users on the internal network that have been moved are prompted repeatedly for their credentials when they run Microsoft Outlook.

You run the Get-OutlookAnywhere cmdlet on CH-EX4, and receive the following output:

```
SSLOffloading: True
ExternalHostname: Client.litwareinc.com
InternalHostname: CH-EX4.litwareinc.com
ExternalClientAuthenticationMethod: Basic
InternalClientAuthenticationMethod: NTLM
InternalClientAuthenticationMethod: Basic
```

Which property should you modify by using the Set-OutlookAnywhere cmdlet?

- A. InternalHostname
- B. ExternalHostname
- C. ExternalClientAuthenticationMethod
- D. InternalClientAuthenticationMethod
- E. InternalClientAuthenticationMethod
