

## [2016-NEW! Collection of 70-414 Exam Questions With Free VCE and PDF Download (Question 41 &ndash; Question 60)

How To 100% Pass New 70-414 Exam: PassLeader have been launched the newest 247q 70-414 exam dumps with all the new updated exam questions. We provide the latest full version of 70-414 PDF and VCE dumps with new real questions and answers to ensure your 70-414 exam 100% pass, and you will get the free new version VCE simulator along with your 70-414 VCE dumps. Welcome to visit our website -- [passleader.com](#) -- and get the premium 247q 70-414 exam questions. keywords: 70-414 exam,247q 70-414 exam dumps,247q 70-414 exam questions,70-414 pdf dumps,70-414 practice test,70-414 vce dumps,70-414 study guide,70-414 braindumps,Implementing an Advanced Server Infrastructure Exam P.S. Download Free 70-414 PDF Dumps and Preview PassLeader 70-414 VCE Dumps At The End Of This Post!!! (Ctrl+End) **QUESTION 41** Your company has three main offices named Main1, Main2, and Main3. The network contains an Active Directory domain named contoso.com. Each office contains a help desk group. You plan to deploy Microsoft System Center 2012 Configuration Manager to meet the following requirements:

- The members of the Domain Admins group must be able to manage all of the Configuration Manager settings.
- The help desk groups must be able to manage only the client computers in their respective office by using Configuration Manager.

You need to recommend a Configuration Manager infrastructure to meet the requirements. Which infrastructure should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

A.&#160;&#160;&#160;&#160; One site that contains a collection for each office

B.&#160;&#160;&#160;&#160; Three sites that each contain one collection

C.&#160;&#160;&#160;&#160; Three sites that contain one collection for each office

D.&#160;&#160;&#160;&#160; One site that contains one collection

Answer: A **QUESTION 42** You plan to delegate the management of virtual machines to five groups by using Microsoft System Center 2012 Virtual Machine Manager (VMM). The network contains 20 Hyper-V hosts in a host group named HostGroup1. You identify the requirements for each group as shown in the following table.

Group name	Requirements
VMAdmins1	Must only be able to manage VMs hosted in HostGroup1.
VMAdmins2	Must only be able to manage VMs that the group creates.
VMAdmins3	Must only be able to view the VMs in HostGroup1.
VMAdmins4	Must be able to manage all the host groups. <a href="#">www.p</a>

You need to identify which user role must be assigned to each group. Which user roles should you identify? To answer, drag the appropriate user role to the correct group in the answer area. Each user role may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.

User roles	Answer Area
Administrators	VMAdmins1
Delegated Administrators	VMAdmins2
Read-Only Administrators	VMAdmins3
Self-Service Users	VMAdmins4

[www.p](#)

Answer:

User roles	Answer Area
	VMAdmins1
	VMAdmins2
	VMAdmins3
	VMAdmins4

**QUESTION 43** Your network contains an Active Directory domain named contoso.com. The domain contains a Microsoft System Center 2012 infrastructure. You deploy a service named Service1 by using a service template. Service1 contains two virtual machines. The virtual machines are configured as shown in the following table. You need to recommend a monitoring solution to ensure that an administrator can review the availability information of Service1. What should you do?

Virtual machine name	Roles and software
VM1	Web server Windows Server 2012 R2 Operations Manager agent Configuration Manager agent
VM2	Windows Server 2012 R2 Operations Manager agent Microsoft SQL Server 2012 Configuration Manager agent

A. From Configuration Manager, create a Collection and a Desired Configuration Management baseline.  
 B. From Virtual Machine Manager (VMM), modify the properties of the service template.  
 C. From Operations Manager, create a Distributed Application and a Monitor Override.  
 D. From Operations Manager, create a Distributed Application and a Service Level Tracking object. Answer: D

**QUESTION 44** Your network contains a data center named DataCenter1 that contains multiple servers. The servers are configured as Hyper-V hosts. Your company deploys a disaster recovery site. The disaster recovery site has a dedicated connection to DataCenter1. The network is connected to the disaster recovery site by using a dedicated link. DataCenter1 contains 10 business critical virtual machines that run a line-of-business application named Appl. You need to recommend a business continuity solution to ensure that users can connect to Appl within two hours if DataCenter1 fails. What should you include in the recommendation? More than one answer choice may achieve the goal. Select the BEST answer. A. From Microsoft System Center 2012 Virtual Machine Manager (VMM), implement live migration on the virtual machines. B. From Hyper-V Manager, create snapshots of the virtual machines. C. From Microsoft System Center 2012 Data Protection Manager, implement a protection group. D. From Hyper-V Manager, implement Hyper-V replicas. Answer: D

**QUESTION 45** You have a failover cluster named Cluster1 that contains four Hyper-V hosts. Cluster1 hosts 20 virtual machines. You deploy a new failover cluster named Cluster2. You plan to replicate the virtual machines from Cluster1 to Cluster2. You need to recommend which actions must be performed on Cluster2 for the planned deployment. Which three actions should you recommend? To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Install the Hyper-V server role.	
Deploy Microsoft System Center 2012 Virtual Machine Manager (VMM).	
Create replicas of the virtual machines.	
Create a snapshot of each virtual machine.	
Install the Hyper-V Replica Broker cluster role.	

Answer:

Actions	Answer Area
Install the Hyper-V server role.	Install the Hyper-V server role.
Deploy Microsoft System Center 2012 Virtual Machine Manager (VMM).	Install the Hyper-V Replica Broker cluster role.
Create replicas of the virtual machines.	Create replicas of the virtual machines.
Create a snapshot of each virtual machine.	
Install the Hyper-V Replica Broker cluster role.	

**QUESTION 46** Your network contains an Active Directory domain named contoso.com. The domain contains several domain controllers. The domain controllers run either Windows Server 2012 or Windows Server 2008 R2. The domain functional level is Windows Server 2008 R2. The forest functional level is Windows Server 2008. The corporate compliance policy states that all items deleted from Active Directory must be recoverable from a Recycle Bin. You need to recommend changes to the current environment to meet the compliance policy. Which changes should you recommend? (Each correct answer presents part of the solution. Choose all that apply.) A. Raise the forest functional level to Windows Server 2008 R2. B. Run the Enable-ADOptionalFeature cmdlet. C. Run the New-ADObject cmdlet. D. Run the Set-Server cmdlet. E. Raise the domain functional level to Windows Server 2012. Answer: AB

**QUESTION 47** Your company has a main office and a branch office. You plan to implement a failover cluster named Cluster1 to host an application named Appl. The data of App1 will replicate to all of the nodes in Cluster1. Cluster1 will contain two servers. The servers will be configured as shown in the following table. The cluster nodes will not use shared storage. The branch office contains two file servers named Server3 and Server4. You need to ensure that App1 fails over automatically to another server if a single node in Cluster1 fails. What should you do? More than one answer choice may achieve the goal. Select the BEST answer.

Server
Server1
Server2

- A. Add Server1, Server2, and Server3 to a Network Load Balancing (NLB) cluster.  
B. Add Server3 as a file share witness for Cluster1. C. Add Server3 and Server4 to a new failover cluster named Cluster2. Install App1 on Cluster2.  
D. Add Server3 as a node in Cluster1.

**Answer: B** **QUESTION 48** Your network contains two servers named Server1 and Server2 that run Windows Server 2012. Server1 has the iSCSI Target Server role service installed and is configured to have five iSCSI virtual disks. You install the Multipath I/O (MPIO) feature on Server2. From the MPIO snap-in, you add support for iSCSI devices. You need to ensure that Server2 can connect to the five iSCSI disks. The solution must ensure that Server2 uses MPIO to access the disks. Which three actions should you perform? To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
On Server1, add the initiator ID of Server2.	
On Server2, from the iSCSI Initiator Properties, run Quick Connect.	
On Server1, from the iSCSI Initiator Properties, click <b>Connect</b> , and then select <b>Enable multi-path</b> .	
On Server2, install the iSCSI Target Server role service.	
On Server2, from the iSCSI Initiator Properties, click <b>Connect</b> , and then select <b>Enable multi-path</b> .

**Case Study 1: Contoso Ltd Case A (QUESTION 49 - QUESTION 60)** **Overview** Contoso, Ltd. is a recruiting and staffing company that has offices throughout North America. The company has a main office and six branch offices. The main office is located in Miami. The branch offices are located in New York, Seattle, Los Angeles, Montreal, Toronto, and Vancouver. **Existing Environment** **Network Infrastructure** The network contains one Active Directory domain named contoso.com. The main office has the following servers: - One file server that maintains multiples shares - Two domain controllers configured as DNS servers - One Windows Server Update Services (WSUS) server - Two DHCP servers that each have a scope for all of the subnets - Two servers that have Failover Clustering configured and are used as virtualization hosts - One server that has Microsoft SQL Server 2012 installed and maintains a customer relationship management (CRM) database Each branch office has the following servers: - One domain controller configured as a DNS server - One DHCP server that has a single scope for its respective office Each office has a single subnet. The network speed of the local area network (LAN) is 1 gigabit per second. All of the offices have a high-speed connection to the Internet. The offices connect to each other by using VPN appliances. **Current Issues** Users report that it can take a long time to download files from network shares in the main office. A root cause analysis identifies that network traffic peaks when the users experience this issue. **Requirements** **Planned Changes** The company plans to implement the following changes: - Replace all of the domain controllers with new servers that run Windows Server 2012. - Upgrade the CRM application to use a web-based application that connects to the current CRM database. The web application will store session data in the memory of each web server. - Initially, deploy two front-end web servers to two virtual machines. Additional virtual web servers will be deployed in the future. - Monitor the availability of the CRM application and create alerts when the overall

availability is less than 99 percent. - Implement Microsoft System Center 2012 to manage the new environment. Business Requirements The company identifies the following business requirements: - Minimize hardware costs and software costs whenever possible. - Minimize the amount of network traffic over the VPN whenever possible. - Ensure that the users in the branch offices can access files currently on the main office file server if a Internet link fails. Technical Requirements The company identifies the following technical requirements: - Provide a highly available DHCP solution. - Maintain a central database that contains the security events from all of the servers. The database must be encrypted. - Ensure that an administrator in the main office can manage the approval of Windows updates and updates to third-party applications for all of the users. - Ensure that all of the domain controllers have the ReliableTimeSource registry value in HKEY\_LOCAL\_MACHINESYSTEMCurrentControlSetServicesW32TimeParameters set to 1, even if an administrator changes that value manually. Virtualization Requirements The company identifies the following virtualization requirements: - Minimize the number of permissions and privileges assigned to users. - Ensure that the members of a group named Group2 can add a WSUS server to the fabric. - Ensure that a diagram view of the virtualization environment can be generated dynamically. - Minimize the amount of administrative effort required to manage the virtualization environment. - Prevent the failure of a front-end web server from affecting the availability of the CRM application. - Ensure that the members of a group named Group1 can create new virtual machines in the Los Angeles office only. - Only create virtual machine templates by using objects that already exist in the System Center 2012 Virtual Machine Manager (VMM) library. - On the failover cluster in the main office, apply limited distribution release (LDR) updates to the virtualization hosts without disrupting the virtual machines hosted on the virtualization hosts. QUESTION 49 You are planning the delegation for the virtualization environment. The delegation must meet the virtualization requirements. Which user role profile should you select for Group2? A. Delegated Administrator B. Read-Only Administrator C. Administrators D. Self-Service User Answer: C QUESTION 50 You need to create a virtual machine template for the web servers used by the CRM application. The solution must meet the virtualization requirements. What should you use? A. An .iso image B. A virtual machine C. A Windows PowerShell script D. A virtual hard disk (VHD) Answer: D QUESTION 51 You are planning the deployment of System Center 2012 Virtual Machine Manager (VMM). You need to identify which additional System Center 2012 product is required to meet the visualization requirements. What should you include in the recommendation? A. Service Manager B. Operations Manager C. Configuration Manager D. App Controller Answer: B QUESTION 52 You need to recommend a solution that resolves the current file server issue. The solution must meet the business requirements. What should you include in the recommendation? A. Distributed File System (DFS) B. BranchCache in distributed cache mode C. BranchCache in hosted cache mode D. A storage pool Answer: A QUESTION 53 You need to recommend a solution for updating the virtualization hosts. The solution must meet the visualization requirements. What should you include in the recommendation? A. Cluster-Aware Updating B. WSUS C. System Center Updates Publisher 2011 D. System Center 2012 Configuration Manager Answer: A QUESTION 54 You need to ensure that Group1 can perform the required tasks. The solution must meet the visualization requirements. What should you create? A. A collection B. A host group C. An organizational unit (OU) D. A site Answer: B QUESTION 55 You need to recommend a solution for managing updates. The solution must meet the technical requirements. What should you include in the recommendation? A. A System Center 2012 Configuration Manager management point in the main office and a System Center 2012 Configuration Manager distribution point in each office. B. A System Center 2012 Configuration Manager management point in the main office and a WSUS downstream server in each office. C. A System Center 2012 Configuration Manager software update point in the main office and a System Center 2012 Configuration Manager distribution point in each office. D. A WSUS upstream server in and a WSUS downstream server in each office. Answer: C QUESTION 56 You need to recommend an automated remediation solution for the ReliableTimeSource registry value. The solution must meet the technical requirements. What should you include in the recommendation? A. A System Center 2102 Configuration Manager configuration baseline. B. A System Center 2012 Operations Manager performance counter rule. C. A System Center 2012 Configuration Manager maintenance task. D. A System Center 2012 Operations Manager event rule. Answer: A QUESTION 57 You need to create a service template for the web servers used by the CRM application. What should you include in the service template? A. A VIP template

B.&#160;&#160;&#160; A host profile C.&#160;&#160;&#160; Guest OS profile D.&#160;&#160;&#160; A capability profile

Answer: A QUESTION 58 You need to recommend a solution that meets the technical requirements for DHCP. What should you include in the recommendation for each office? A.&#160;&#160;&#160; Network Load Balancing (NLB)

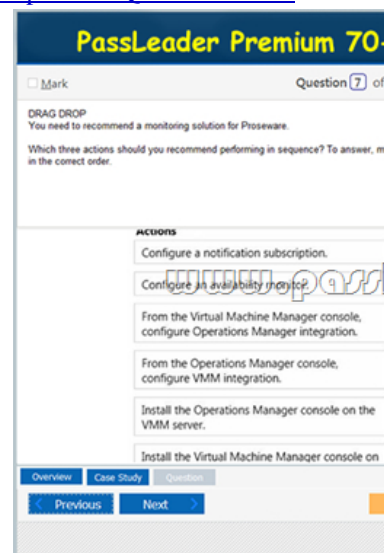

B.&#160;&#160;&#160; DHCP failover C.&#160;&#160;&#160; DHCP server policies D.&#160;&#160;&#160; IP Address Management (IPAM) Answer: B QUESTION 59 You need to recommend a solution for deploying the web servers for the CRM application. The solution must meet the visualization requirements. What should you include in the recommendation?

A.&#160;&#160;&#160; Network Load Balancing (NLB) without affinity B.&#160;&#160;&#160; Failover Clustering with one active node C.&#160;&#160;&#160; Failover Clustering with two active nodes D.&#160;&#160;&#160; Network Load Balancing (NLB) with client affinity Answer: D QUESTION 60 You need to recommend a solution that manages the security events. The solution must meet the technical requirements. Which configuration should you include in the recommendation?

A.&#160;&#160;&#160; Object access auditing by using a Group Policy object (GPO) B.&#160;&#160;&#160; Event rules by using System Center 2012 Operations Manager C.&#160;&#160;&#160; Event forwarding by using Event Viewer

D.&#160;&#160;&#160; Audit Collection Services (ACS) by using System Center 2012 Answer: D Download Free 70-414 PDF Dumps From Google Drive:
