NEW QUESTION 311 A company has a forest trust with a partner organization. Users from both organizations log on to devices that run Windows 8.1. You plan to replace the devices with devices running Windows 10. You need to migrate user profiles from both forests using the least amount of administrative effort. Solution: You enable roaming profiles on the user accounts and have them log on to the new device. Does the solution meet the goal? A. Yes B. No Answer: B NEW QUESTION 312 A company has a forest trust with a partner organization. Users from both organizations log on to devices that run Windows 8.1. You plan to replace the devices with devices running Windows 10. You need to migrate user profiles from both forests using the least amount of administrative effort. Solution: You migrate both profiles simultaneously by using the User State Migration Tool (USMT). Does the solution meet the goal? A. Yes B. No Answer: A Explanation:

<https://docs.microsoft.com/en-us/windows/deployment/usmt/usmt-migrate-user-accounts#bkmk-migrateall> NEW QUESTION 313 You administer devices in your corporate environment. The company allows employees to bring their own devices (BYOD). All BYOD devices must run Windows 10. For employees who elect to not use BYOD, the company provides a corporate laptop. The company has a Microsoft Intune subscription and all BYOD devices have the Intune client installed. None of the BYOD devices are joined to the domain. All the corporate standard devices are managed by System Center Configuration Manager (SCCM). You have an application that was developed in house that must be installed on all the BYOD devices. The application must be installed automatically on the BYOD devices without any user intervention. Solution: You download and install a sideloading product activation key on all of the BYOD devices. You upload the application to the Intune storage and configure the app deployment action as required install. Does the solution meet the goal? A. Yes B. No Answer: B NEW QUESTION 314 Drag and Drop You administer the Windows 10 desktop environment for an organization. All desktop machines have Windows 10 Enterprise edition installed and are joined to the domain trey.com. All servers in trey.com run either Windows Server 2012 or Windows Server 2012 R2. Users are permitted to bring their own devices. Users must be able to access their data from all devices including Apple iOS devices. You need to implement a solution that provides the access to the data from all devices and synchronizes data across all devices without requiring subscription services. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Actions

Deploy and configure the work folders client on all devices

Configure Offline Files and Folders on all devices

Configure a Sync share

Configure a Microsoft Intune subscription with device policies

Add the Work Folders role service on a Windows Server 2012 server

Add the Work Folders role service on a Windows Server 2012 R2 server

Configure the Device Registration service on a Windows Server 2012 R2 server

Answer Area

The company allows employees to bring their own devices (BYOD). All BYOD devices must run Windows 10. For employees who elect to not use BYOD, the company provides a corporate laptop. The company has a Microsoft Intune subscription and all BYOD devices have the Intune client installed. None of the BYOD devices are joined to the domain. All the corporate standard devices are managed by System Center Configuration Manager (SCCM). You have an application that was developed in house that must be installed on all the BYOD devices. The application must be installed automatically on the BYOD devices without any user intervention. Solution: You create an SCCM application and deploy it to the All Mobile Devices collection. Does the solution meet the goal? A. Yes B. No Answer: B NEW QUESTION 317 You administer devices in your corporate environment. The company allows employees to bring their own devices (BYOD). All BYOD devices must run Windows 10. For employees who elect to not use BYOD, the company provides a corporate laptop. The company has a Microsoft Intune subscription and all BYOD devices have the Intune client installed. None of the BYOD devices are joined to the domain. All the corporate standard devices are managed by System Center Configuration Manager (SCCM). You have an application that was developed in house that must be installed on all the BYOD devices. The application must be installed automatically on the BYOD devices without any user intervention. Solution: You upload the app to the Intune storage and make the app available. Does the solution meet the goal? A. Yes B. No Answer: A Explanation: <https://docs.microsoft.com/en-us/intune/lob-apps-windows> NEW QUESTION 318 You are the system administrator for a company. You are deploying a new Microsoft Office 365 environment. You have an existing on-premises Microsoft environment. You must deploy Microsoft Intune in a hybrid environment. You need to configure the service connection point role. Which tool should you use? A. Microsoft Office 365 Admin Center portal B. Microsoft Azure AD Admin Center portal C. Microsoft System

Center Configuration Manager (SCCM) console D. Microsoft System Center Operations Manager (SCOM) console Answer: C Explanation: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/create-service-connection-point> NEW

QUESTION 319 You administer Windows 10 Enterprise client computers in your company network. The company has an Active Directory Domain Services (AD DS) domain. The network uses a DHCP server. You want to assign a static dynamic host configuration protocol (DHCP) reservation for a client computer. You need to identify the media access control (MAC) address of the client computer. Which command should you use? A. ipconfig /allcompartment B. ipconfig C. ipconfig /flushdns D. ipconfig /all Answer:

D Explanation: <https://docs.microsoft.com/en-us/windows-server/administration/windows-commands/ipconfig>

<https://ithelp.brown.edu/kb/articles/find-the-mac-address-of-a-computer-or-device> NEW QUESTION 320 You are setting up a test environment and configuring a Windows 10 Enterprise computer. The test environment uses trunk ports. The network department wants to use tagging to differentiate the networks. You need to modify the settings of the computer so that it uses network 81. Which network setting should you configure? A. Flow Control B. VLAN ID C. Receive Side Scaling D. Network Address Answer: B Explanation:

https://www.startech.com/faq/networking_VLAN_tagging NEW QUESTION 321 You support Windows 10 Enterprise desktop computers and tablets. All of the computers are able to connect to your company network from the Internet by using DirectAccess. Your company wants to deploy a new application to the tablets. The deployment solution must meet the following requirements:

? The application is not accessible if a user is working offline ? The application is stored on an internal solid-state drive (SSD) on the tablets ? The application is isolated from other applications ? The application uses the least amount of disk space You need to deploy the new application to the tablets. What should you do? A. Deploy the application as an Application Virtualization (App-V) package. Install the App-V 4.6 client on the tablets. B. Deploy the application as a published application on the Remote Desktop server. Create a Remote Desktop connection on the tablets. C. Install the application on a local drive on the tablets. D. Install the application in a Windows To Go workspace. E. Install Hyper-V on tablets. Install the application on a virtual machine. F. Publish the application to Windows Store. G. Install the application within a separate Windows 10 Enterprise installation in a virtual hard disk (VHD) file. Configure the tablets with dual boot. H. Install the application within a separate Windows 10 Enterprise installation in a VHDX file. Configure tablets with dual boot. Answer: B NEW QUESTION 322 A company has Windows 10 Enterprise client computers. You install a new device on a client computer. The device installation includes an application that runs when the computer starts. You experience problems with the application. You need to prevent the application from the running when the computer starts, without affecting any other application. What should you do? A. Configure the application by using Task Manager B. Run the bcdedit command C. Run the msconfig command D. Configure the device by using Device Manager Answer: A Explanation:

<https://support.microsoft.com/en-us/help/4026268/windows-10-change-startup-apps> Here's how to change which apps will automatically run at sta

1. Select the **Start** button, then select **Settings** > **Apps**
2. If you don't see the **Startup** option in **Settings**, right-click the **Startup** option. (If you don't see the **Startup** tab, select **More details**.) Select **Disable** so it doesn't run.
