

CCIE Security Lab Exam Change (Open-Ended-Question)

Not long ago, CCIE R&S exam have been added the short Answer Questions. And now CCIE Security will become the 2nd CCIE Track to receive the questions also. Here is the Cisco official word: Effective June 15, 2009, the Cisco CCIE Security lab exam will feature a new type of question format in a section called Core Knowledge. In this new section, candidates will be asked a series of four open-ended questions that require a short, typewritten response (typically several words). The questions will be randomly drawn from a pool of questions on topics currently eligible for testing on the CCIE Security lab exam. No new topics are being added. Candidates will have up to 30 minutes to complete the Core Knowledge section of the exam, and may not return to the questions later. First introduced to the CCIE Routing and Switching lab exam in February 2009, Core Knowledge questions will eventually be added to all CCIE tracks. The changes allow Cisco to maintain strong exam security, and they help ensure that only qualified candidates are awarded CCIE certification. Maybe the CCIE other track are coming soon?
