

CCNP ISCW(642-825) Lab - PPPoE

Pass4sure is a small export company. This firm has an existing enterprise network that is made up exclusively of routers that are using EIGRP as the IGP. Its network is up and operating normally. As part of its network expansion, Pass4sure has decided to connect to the internet by a broadband cable ISP. Your task is to enable this connection by use of the information below.

Connection Encapsulation: PPP Connection Type: PPPoE client Connection Authentication: None Connection MTU: 1492 bytes
Address: Dynamically assigned by the ISP Outbound Interface: E0/0 You will know that the connection has been successfully enabled when you can ping the simulated Internet address of 172.16.1.1 Note: Routing to the ISP: Manually configured default route

```
P4S-R# show ip route
....
Gateway of last resort is not set
  192.168.1.0/27 is subnetted, 7 subnets
C    192.168.1.0 is directly connected, Ethernet0/1
D    192.168.1.32 [90/307200] via 192.168.1.2, 00:02:16,Ethernet0/1
D    192.168.1.64 [90/307200] via 192.168.1.2, 00:02:17,Ethernet0/1
D    192.168.1.96 [90/307200] via 192.168.1.2, 00:02:17,Ethernet0/1
D    192.168.1.128 [90/307200] via 192.168.1.3, 00:02:17,Ethernet0/1
D    192.168.1.192 [90/307200] via 192.168.1.3, 00:02:17,Ethernet0/1
D    192.168.1.224 [90/307200] via 192.168.1.3, 00:02:17,Ethernet0/1
```

P4S-R# show run

```
